■ About Us

Tir-Con solely produces poultry units of steel-framed construction, which hold numerous advantages over their timber-frame equivalent. These benefits include increased capacity, lower maintenance requirements and ease of cleaning, while the units are also environmentally friendly.

Each and every project, irrespective of size, commands personal involvement from the experienced Tir-Con team from conception to completion, and every solution is delivered to exact customer requirements. Tir-Con's customers know they can rely on the company's depth of knowledge and decades of experience to achieve the best results through every stage of the project.

■ Concrete

We have an experienced dedicated team to carry out all form work, precast panels and flooring.

INSULATION AND REINFORCING INSIDE SHUTTER

FINISHED SHUTTER WALL

CONCRETE PANELS

Our recent developments include PVC roofing, which increases the lifespan of the house, while Tir-Con's innovative design uses fewer joints, which minimises air leakage and heat loss.

Unlike years ago, steel houses are now built using PVC and 20-year- guaranteed material, so customers can be confident that they are a very high quality unit.
